

Case	Page and Views	Feedback
1	Home Page and Featured Page	+ Nice and Clean +- The arrangement of the pages seems familiar; I feel comfortable when exploring the home page.
	Search Result Page	+ Easy to navigate to - Probably not the best idea to put results on the same level as main page.
	Player View	- The note field is not very useful. + The player view is well designed. + I like the animation when you press the thumb up, thumb down and the bookmark button. + I am amazed that you can grab the player and put it on the side.
	User Page	+ Nice background Image + The login view is well designed + The bookmarked contents are easy to find
	History View	+ Clean and Informative
2	Home Page and Featured Page	+ Informative Contents + I like the information-feed style.
	Search Result Page	+- It's nice to have search function being implemented but the search process took too long (backend issue)
	Player View	+ Really Like the sidebar, that's a very smart design of showing Wiki and Topic Information. + The auto resizing note section is pretty good. ++ The draggable player View is awesome
	User Page	+ Nice design and clean login page + Like the user history and bookmark Content design. Bookmark is kind of more important than History.
3	Home Page, Featured Page, Search Result Page	+- Looks familiar to an app I use everyday - The colour scheme is a bit odd. + I like the auto navigation to search result page when you put the keywords in the search field on other pages. ++ The pages are very responsive, no lag at all when I was switching among them.
	Player View	+ The animation is cool ++ Draggable player view is beyond my expectation + The auto-resizing note field is also very user friendly + Sometimes the sidebar returns Unavailable. (backend issue)
	User Page	+ Clean Design + Love the fact that you can quit the application and come back to find out its still logged in!
