

# X5GON Mobile

Rethinking Mobile Learning on iOS

Team 4 : Patrick Wu, Yinrui Hu

# Introduction

## Abstract

**X5GON** is an industrial leading Open Education Resource Provider. In this project, we worked with the UCL's X5GON research team to deliver a mobile application that provides users with an authentic and mobile-friendly X5GON experience and learning materials catered to their needs.

With this project, the X5Learn system would be able to attract more customers from the mobile platform and enable its users to have all their customised X5Learn experience at hand anytime, anywhere.

### Blazing fast loading speed.

We utilised extensive pre-fetching and multi-threaded loading techniques to balance network load and enhance our performance. Delivering significantly more responsive and smoother user experience than our competitor.

## Technology

- Used **Swift** as our main language, **Xcode** and its toolchains as our main SDK in our project.
- Designed our software with the classic **MVC Architecture**.
- Utilised design patterns including **Prototype Pattern**, **Adapter Pattern** and **Builder Pattern**.
- Incorporated on **SwiftSoup**, an external parser for HTML, together with our own algorithm to analyse changing API endpoints on the fly and self-adapt the code.
- Deployed **Jazzy** to generate our documentation website.
- Tested APIs and App UIs with **XCTest**
- Pipelined CI/CD with **Travis**

## Main Toolchain

# Swift

# Xcode

## Dependencies

## CI/CD Provider

# Travis CI

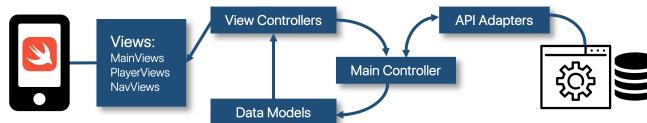

## Code Hosting

# GitHub

### MVC Architecture. Swift. The Natives and Classics.

As a typical client-based application on iOS, we adopted the MVC Architecture and Swift Development Language. See below for more details.

# Achievement

---

ID	Description	Priority	State	Contributors
1	View all types of OER	Must	<input checked="" type="checkbox"/>	Patrick
2	Suggest relevant OERs and show them below the OER that is currently on display	Must	<input checked="" type="checkbox"/>	Patrick
3	Play or pause an OER video	Must	<input checked="" type="checkbox"/>	Patrick
4	View a specific OER and its details when users press it	Must	<input checked="" type="checkbox"/>	Patrick
5	Bookmark a specific OER	Must	<input checked="" type="checkbox"/>	Patrick
6	Add notes to the OER when they are on display	Must	<input checked="" type="checkbox"/>	Patrick / Felix

# Achievement

---

ID	Description	Priority	State	Contributors
7	Show the person or organisation who uploads the OER material	Must	<input checked="" type="checkbox"/>	Patrick
8	Search X5GON OER collections for keywords	Must	<input checked="" type="checkbox"/>	Patrick
9	View their browsing history	Must	<input checked="" type="checkbox"/>	Patrick
10	Full screen (focus) mode to view OERs	Must	<input checked="" type="checkbox"/>	Patrick
11	Rate an OER by pressing the like and dislike button	Must	<input checked="" type="checkbox"/>	Patrick
12	Login and logout of their accounts.	Should	<input checked="" type="checkbox"/>	Patrick

# Achievement

---

ID	Description	Priority	State	Contributors
13	Buffer users' notes for a specific OER and send them to the backend of X5GON.	Should	<input checked="" type="checkbox"/>	Patrick
14	Preload the video shown on the lists for responsiveness.	Should	<input checked="" type="checkbox"/>	Patrick
15	Provide different main pages, including trending, subscribed contents.	Should	<input checked="" type="checkbox"/>	Patrick / Felix
16	Create a simulated backend to pre-develop certain features	Should	<input checked="" type="checkbox"/>	Patrick
17	Deploy this software on different platforms, e.g. iPhone, iPad	Could	<input checked="" type="checkbox"/>	Patrick
18	Allow users to report inappropriate content	Could	<input checked="" type="checkbox"/>	Patrick

# Achievement

---

ID	Description	Priority	State	Contributors
19	Continuous Integration with Travis	Could	<input checked="" type="checkbox"/>	Patrick
20	Introduce unit testing to the Application	Could	<input checked="" type="checkbox"/>	Felix / Patrick
21	Have captions or translations for captions	Won't		
22	Allow users to upload OER from our app	Won't		
23	Allow users to collaborative edit notes	Won't		
24	Allow commenting on OER	Won't		
25	Show users' note to other users	Won't		
26	Keep suggesting the same OER to same user	Won't		
Key Functionalities :		100 %		
Optional Functionalities		100 %		

\*Certain modifications are made to the MoCoW list upon mutual agreement with the client during the project.
